

Hornady

Thanks for taking the time to visit us and thanks for your patience as we work on our new site. Within the next few weeks we will be opening a whole new site that we think you will find easier to navigate as well as providing much more information. You will find more product info, more ballistic info and an easier way to get there. We even expect to change the picture to the right a little more frequently!

Please bear with us as we get all the pieces together to make this a better site for you.

Good Shooting,

National Shooting Sports Foundation's Bullet Points

Hornady

Match Grade Bullets

Hornady match bullets are the result of taking a fundamentally sound design- the boattail hollow point- and pushing that design to perfection. Hornady match bullets are also subject to painstakingly stringent production and testing controls. And they are not just tested in the lab. They are tested in competition by the ballistic engineers who designed them. So you can be confident that every enhancement to Hornady match bullets has and will happen for one reason only- to improve the score.

Hornady match bullets continue their growing surge in popularity by winning more matches than ever before. More and more competitive shooters are discovering that Hornady match grade boattail hollow point bullets can print groups that are consistently tighter than competitive bullets.

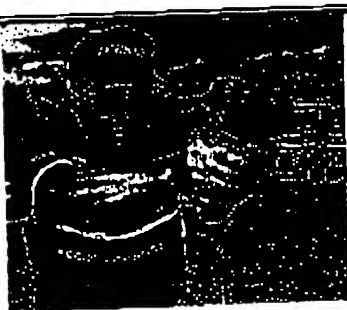

As competition shooters themselves, our ballistic engineers want to win, just like you. They refuse to make design changes that don't improve performance only for the sake of change. We prefer to focus on refining the elements of match bullet design that are proven to affect accuracy.

If you are looking for a way to improve your scores, join the crowd. Take your expectations to a higher level by setting your sights on better performance. Ask your dealer for Hornady match bullets.

The Illinois team, using Hornady's 22 cal. 75 gr. BTHP Match bullets won the 1997 National Infantry Trophy Match at Camp Perry.

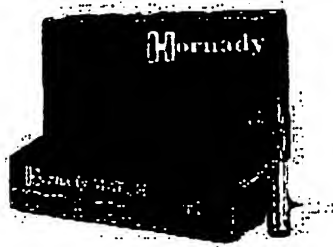

Jerry Barnhart, using Hornady XTP bullets, won more than eight key matches in 1997, including a repeat victory at the American Handgunner World Shootoff. Also in 1997, Jerry set a new record at the Second Chance Combat

Shoot for 5 tables of 5-pin with a total time of 15 seconds.

Pushing match bullet design to perfection.

Pistol Match Target Bullets

Our jacketed target pistol bullets are designed with the classic, time-tested, semi-wadcutter profile. They feature a long, straight bearing surface for optimum stability, a sharp square heel proven to be critical for handgun bullet accuracy and a sharp shoulder for clean scores on targets. In addition to wadcutters, our jacketed XTP bullets are being used by some of the top handgun shooters in the world. [Click here for more information about XTP.](#)
